Interior Design App

<https://github.com/tptorres/Capstone-Project-2020>

Nicholas Samaroo's work:

‘/’ denotes looked into but not thoroughly

Work from last week:

[x] Looked into MongoDB GridFS and how it may help us in storing large images

[x] Worked on main login screen with React Native

[x] Looked into how to create multi- page apps in React Native

Added mid-week: N/A

For this week:

[] Finish the main login screen

[] Look into Google Authentication for sign in

[] Continuing working with React Native to flesh out the other app pages and switching between different pages using React Navigation

[] Refresh on the back-end connections with Node.js and Express

Tyler's work:

Work from last week:

- [x] Built a test UI for the main screen of the app and got more acquainted with the differences between React Native and React

- [x] Looked into storing and uploading images to a server and successfully was able to upload the images, but ran into a problem where the images were encoded in a base64 string.

- [x] Started mapping out if we should store images sent through requests on the Interior Designer's phone, and whether or not to cache a limit of 10.

Added mid-week: N/A

For this week:

- [ ] Finish the image uploading portion of the code

- [ ] Get started on connecting the database and creating the models for Interior Designers and Non-IDs

- [ ] Start fleshing out the relations between the data and how they are going to look in the database
