Interior Design App

<https://github.com/tptorres/Capstone-Project-2020>

Nicholas Samaroo's work:

‘/’ denotes looked into but not thoroughly

Work from last week:

[x] Learned React Navigation in order to navigate between different screens in our mobile app

[x] Fleshed out the different screens and flow for the app via mapping out what screen should appear after clicking a certain button

[x] Found and used resource to implement Google Authentication

Added mid-week: N/A

For this week:

[] Finish mapping out where the data received from the Google Authentication is going to go

[] Continue working on user flow (i.e. the different screens in the app)

[] Make a branch on github for the code I have written in order to streamline the development process

Tyler's work:

Work from last week:

- [x] Focused on backend routes and drew out all necessary routes needed for the app

- [x] Figured out how to successfully store images on the backend and convert them to base64 strings to send them to the database

- [x] Decided on limiting images to 5 within one request due to size constraints in database

Added mid-week: N/A

For this week:

- [] Finish models for Users and Images and the relation between the two

- [] Start pushing work to Github and implementing changes made from test repo

- [] Outline authentication middleware for each route so they are protected
