

# Indesyn

Nicholas Samaroo, Tyler Torres

Hunter College  
CS499 Capstone Spring 2020  
MVP Demo  
4/6/2020

01

## Problem

- The process of finding an interior designer is not very streamlined.
- There also lacks a diverse platform that connects people with a variety of interior designers.

02

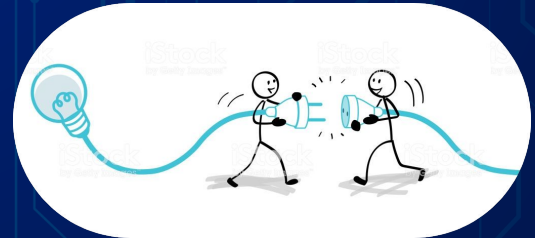

## Vision

- Creating a platform for users to find an interior designer, on the other hand, establishing a hub for designers to connect with users and display their work.

03

## Product Definition

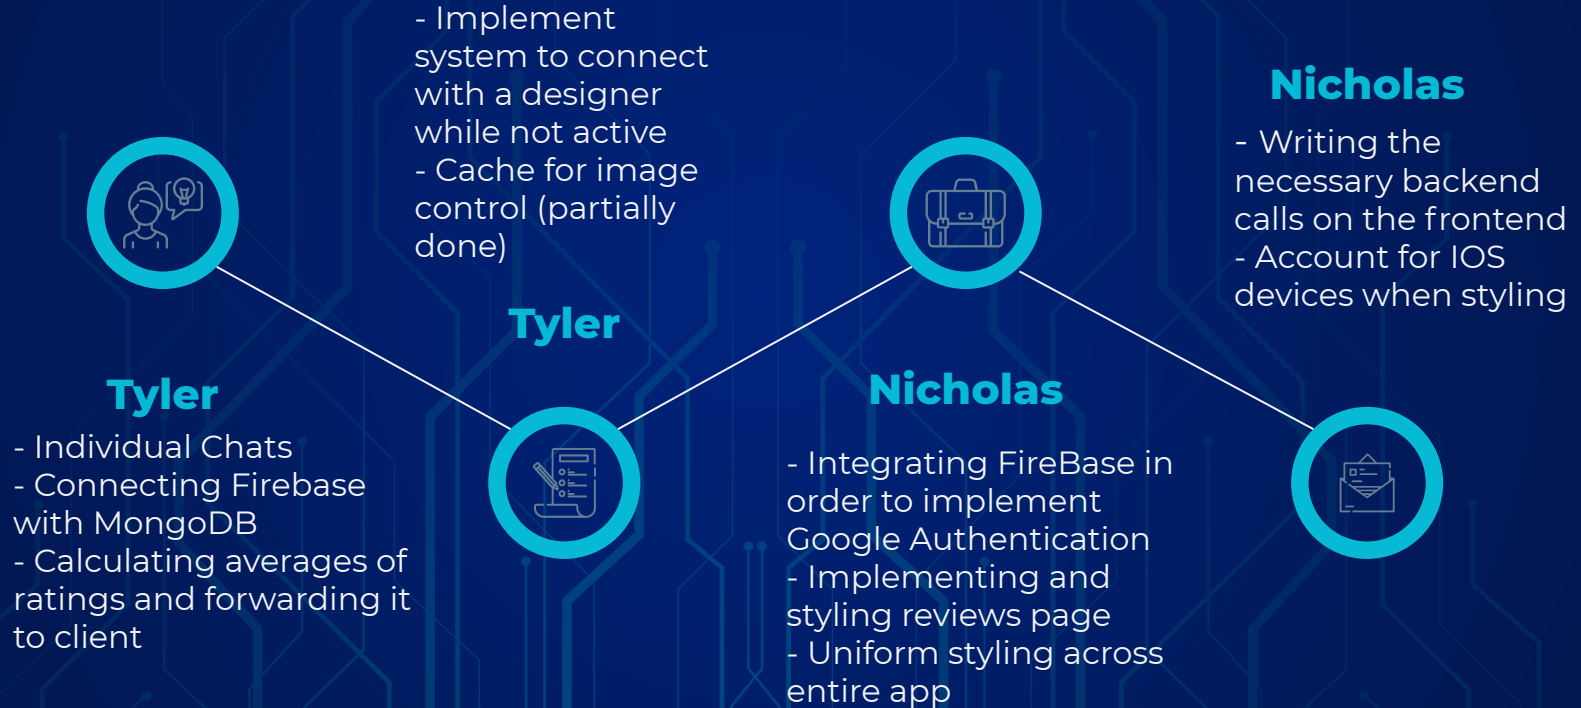

- The ultimate goal is to liven up the interior space of our users
- Connecting people to those with the trained eye and giving them a platform to receive the aid they need
- Our platform accomplishes this end goal by displaying designer's past work to exhibit expertise
- Allows both parties to interact efficiently

DEMO

# Remaining Work

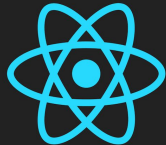

# Tech Stack

## MERN

mongoDB

React Native

Express JS

## Firebase

Firebase

We are still using the MERN stack but also decided to integrate FireBase in order to implement some key features.

# Possible Future Additions

## Geolocation

Geolocating users and grabbing designers closest in proximity

## Search

Being able to find designers within the app
