Interior Design App

https://github.com/tptorres/Capstone-Project-2020

Nicholas Samaroo's work:

'/' denotes looked into but not thoroughly

Work from last week:

[x] Finished the reviews screen; implemented the modal for when the NID clicks a review *and* encapsulated the list of reviews in a scroll view.

[x] Laid the groundwork for Google authentication with Firebase and also looked into email/password authentication with Firebase.

Added mid-week: N/A

For this week:

[] Encapsulate the list of designers on the "Find a Designer" page in a scroll view

[] Finish up Google authentication via Firebase / consider general email/password authentication

[] Pending on completion of the above two, go through the app and improve the styling. Also, help Tyler with the associated work involving GiftedChat.

Tyler's work:

Work from last week:

        [x] Researched GiftedChat and figured out how to link pictures so they would be viewable on both ends

        [x] Worked on test repository to see how transferring data from one view to another will work for the NID request

Added mid-week: N/A

For this week:

        [] Create intermediate page on non-interior designer's end so the transition to the chat looks more fluid

        [] Clean up GiftedChat code and work towards individual inboxes

        [] Implement code that will allow the NID to leave a review of the ID at the end of an interaction
